MEMORANDUM TO: All Retirement Home Licensees

FROM: Jacqueline Cureton
Assistant Deputy Minister
Ministry for Seniors and Accessibility

SUBJECT: Update – Retirement Homes COVID-19 Guidance on Screening

As we approach the end of this calendar year, I would like to thank you for your continued dedication and efforts in keeping home operations running smoothly and for supporting and caring for residents and their loved ones.

In light of the rising community spread of COVID-19 and the [new variant of concern](#) (Omicron), this memo provides increased provisions and guidance for retirement homes over the holiday season.

While the great majority of retirement homes have extremely high COVID-19 vaccination rates amongst residents, continued adherence to IPAC measures is crucial to managing this challenge.

Across Ontario, there are areas that are experiencing rapid increases in cases and local public health units have implemented additional public health measures. Dr. Kieran Moore, the Chief Medical Officer of Health of Ontario, continues to actively monitor the situation and is working closely with the local public health units to prevent and control transmission of COVID-19.

The following recommendations should be adhered to unless different direction is provided by your local public health unit:

1. New COVID-19 Variant of Concern (Omicron) and Screening

Further to the memo sent out by Deputy Minister Carlene Alexander on November 29, 2021 about the Omicron variant of concern, the Government of Canada [announced](#) on November 30, 2021, that Egypt, Nigeria and Malawi have been added to the list of countries with additional travel restrictions.

All travellers who have been in any of the 10 identified African countries in the 14 days before travelling to Canada will be subject to enhanced testing, screening, and federal quarantine measures for 14 days after being in the identified country if they are Canadian citizens, permanent residents, or hold status under the Indian Act. In addition, the Government of Canada requires all fully vaccinated travellers arriving by air from departure points other than the 10 African countries and the United States (US), to have a PCR test on entry and quarantine until they have a negative test result. Unvaccinated travellers are required to quarantine for 14 days post-arrival in Canada and get tested on days 1 and 8.

As per the federal government's implementation of enhanced measures, anyone who has travelled to any of the 10 identified African countries within the last 14 days, regardless of vaccination status, is not permitted to enter a retirement home as they are not permitted to leave their place of quarantine. This requirement also applies to individuals in the same household of a person who is currently required to be in quarantine because of recent travel. This includes individuals intending to visit palliative residents as well as staff, essential caregivers, support workers, visitors, students, volunteers, and contractors.

Furthermore, based on advice from Dr. Kieran Moore and the Office of the Chief Medical Officer of Health of Ontario, individuals who have travelled to any country outside of Canada within the last 14 days, including the US, and who are not under federal quarantine will be required to undergo rapid antigen testing when entering a retirement home, regardless of vaccination status. Rapid antigen testing results are valid for 48 hours. Retirement homes are expected to come into compliance with this new antigen testing requirement by December 13, 2021; however it is recommended that homes strive to implement these changes as soon as possible.

All licensed retirement homes are pre-approved to access rapid antigen tests from the Provincial Antigen Screening Program (PASP). Any home that is not already accessing test kits through this program can proceed directly to ordering rapid antigen tests through the [provincial website](#). More information about PASP and antigen screening in the retirement homes sector can be found at: <https://www.orcaretirement.com/news/coronavirus-update-resources/pasp/>.

In addition, please note that retirement home residents who travelled to any of the 10 identified African countries within the last 14 days will not need to undergo and pass the screening requirements upon return to the home. These residents must be permitted entry, isolated on [Droplet and Contact Precautions](#) and tested for COVID-19 as per federal requirements. The Ministry of Health is updating the [COVID-19 Screening Tool for Long-term Care Homes and Retirements Homes](#) to reflect these requirements **effective December 9, 2021**.

Thank you for your continued dedication and commitment to improving the quality of care for seniors in Ontario.

As always, should you have questions you, please contact us at RHInquiries@ontario.ca.

Sincerely,
